Reply to the my report doc

My Report

1) Analysis and Medical Scan Reports's categoties are static or comes from server dynamically ?

ans : I think the categories should be able to edited in the cms and please notice that there should be 3types of languages you need to set for this part.

2) User can select only one category at a time or multiple selector ?

ans : This is the filter we need to choose the report users want as soon as possible so I suggest users can be able to choose multiple selectors and reports of the selected categories will be shown.

3) What is the payment procedure there is any specified price for translate report or price will change according to requirement.

ans : As per discussion with the client recently, the client said that the translation price is fixed as hkd 500 but i think the client will change the price if necessary. But the all report translation fee will be the same no matter what kind of report it is.

4) User can view there reports or not if yes then is there any option to view the report ?

ans : Users can surely view the reports as this app is to let them view the reports wherever they want in the soft copy way. after clicking in the report, there should be a picture of the report in pdf or jpg or other picture file shown.

My authorized doctors

5) What is the code for the doctor which one used in authoired doctor. Is every doctor have their unique code and how it will manage in CMS.

ans : When big admin creates a doctor account and center account, he needs to fill in some information : Login Id , Login Password , Assess Right , Code. The code means the number in the panel so the big admin can easily know how many centers and doctors are in the panel.

6) User can search also for Center ? As you mention (Doctor/Center)

ans : yes as we consider doctors and centers are the same unit. Users can use the name and code to search them and authorize them to upload and view patients' reports in the cms.

7) As per terry requirement he need multiple locations (min 1 and max 10 location) for doctor, then it will very hard for us make multiple loction on one page. For this i think we have to make seperate location management where we can add locations and while adding doctor or clinic we will choose that location for drop list for the clinic we can choose one location and for doctor we can choose multiple locations.

ans : sure and please let me know where you will put in the cms

8) What are the values in header and footer fields ? Please explain

ans : The value of number 3 is the month. and the footer should be deleted.

9) One View item is in light blue color with header footer and other are with white background. Please explain it.

ans : Please change all item to white background and delete all the arrows as all the appointment information is already shown.

10) Please explain these options functionality with all three language

ans : there should be one column for users to enter the category and there should be 3 languages.
